

SEPTIAN PUTRA RACHMAN HAKIM

Full-Stack Developer | AI/ML Systems

iannnubb@gmail.com | +6282132167400 | Jember, Indonesia

linkedin.com/in/iannnub | github.com/iannnub | porto-iannnub.vercel.app

PROFILE

Information Systems graduate (S.Kom, **GPA 3.88/4.00**) specializing in full-stack development and applied AI/ML, with 5+ years of hands-on experience building production-grade systems end-to-end, from database design and backend APIs to frontend interfaces and deployment. Independently designed and built multiple full-stack platforms as sole developer, including a multi-tenant SaaS attendance system, a faculty management system with custom RBAC, and an AI-integrated tourism platform combining a hybrid recommendation engine with a multilingual RAG chatbot (1,500+ users). Also bring a founder's perspective from running Javapedia, a self-managed digital business, for over 4 years, integrating payment gateways and managing end-to-end operations. Comfortable across the modern web stack (Laravel, React, Next.js, FastAPI) and AI tooling (LangChain, RAG, vector databases), with a strong bias toward shipping reliable, well-documented, production-ready software.

WORK EXPERIENCE

Javapedia

Founder & Developer | Sep 2020 – Feb 2025

- Founded and managed Javapedia, a self-built digital business, from the ground up from initial website development to full business operations.
- Oversaw end-to-end platform management, including system stability, website maintenance, and customer-facing support via live chat.
- Recruited and led a team of 6 service staff to handle service operations, while personally overseeing website/system reliability and customer communications.
- Implemented real-time incident logging and escalation procedures, coordinating with payment providers (Midtrans) to resolve API and server-side issues.
- Automated financial reconciliation by integrating Midtrans transaction data with internal record-keeping, eliminating manual entry errors and maintaining fully audit-ready documentation.

Rachmad Handycraft

Business & Digital Support | Dec 2022 – Apr 2025

- Designed and built the company's e-commerce website and support system from the ground up, later managing its stability and performing ongoing technical front-end updates to ensure a seamless and secure online transaction experience.
- Planned and executed digital advertising campaigns (ads promotion) to drive traffic and increase online sales conversion.
- Identified and optimized operational workflow inefficiencies, contributing to significant system performance improvements and revenue growth.

PT Antosa Architect

System Solutions Intern (Information Systems Intern) | Jun 2025 – Aug 2025

- Designed and developed a Management Information System (PHP) for project ordering, progress tracking, reporting, and design revision workflows.
- Built a multi-role system (admin, client, project team) to manage residential construction projects, enabling clients to submit project requests, review progress, and request design revisions.
- Collaborated with stakeholders to translate business requirements into system features, improving project coordination and transparency.

Wuluhan Community Health Center

Technical Systems Analyst (Intern) | Nov 2025 – Jan 2026

- Designed and developed a drug inventory management information system from scratch (PHP, MySQL/PDO), replacing a fully manual paper-based process.
- Built the system to track stock-in/stock-out across 9 clinical units: General Clinic, Dental Clinic, HIV Clinic, TB Clinic, TBS Clinic, Maternal and Child Health, Emergency Unit, Inpatient Ward, and the Pharmacy.
- Analyzed existing manual workflows and translated staff feedback into functional system features and improvements.
- Conducted comprehensive system testing and debugging to ensure high data integrity across all departments.

KEY PROJECTS

JemberTrip: AI-Integrated Tourism & Recommendation Platform (Individual Project)

- Built a multilingual RAG-powered chatbot (LangChain + external LLMs via HuggingFace/Groq) that answers Jember-specific tourism queries (e.g., hotels near Papuma Beach) and dynamically responds in Indonesian, Javanese, or Madurese based on user language selection.
- Engineered an asynchronous FastAPI backend with PostgreSQL for real-time clickstream tracking and ChromaDB for vector-based semantic search, delivering Top-N recommendations in under 1 second.
- Built the frontend with React.js and Vite, using non-blocking REST API calls (Axios) to capture user interaction data without impacting UI performance.
- Deployed publicly and used by 1,500+ users over 3 months; later adopted as undergraduate thesis (skripsi) topic.

SIMPRESMA: Faculty Achievement Management System (Individual, Full-Stack Developer)

- Developed a comprehensive management system for UNEJ Computer Science Faculty using Laravel 11 and React 18 (TypeScript), serving as a centralized platform for academic achievement tracking.
- Engineered a custom RBAC (Role-Based Access Control) system, enabling precise management for diverse stakeholders (Wadek, Tendik, Verifikator, Students) and Integrated a Data Export Engine (Excel/CSV) and Telegram Bot API for real-time notifications

SiPresensi: Multi-Tenant Attendance SaaS for Schools (Individual, Full-Stack Developer)

- Designed and built a multi-tenant attendance platform (Laravel 12, MySQL, Redis) with subdomain-based tenant isolation, IoT/fingerprint device integration, real-time WebSocket dashboards, and automated WhatsApp notifications; currently in pilot testing with the university.

KakYo Lesson: Music Lesson Management, Attendance & Payroll System (Individual Project, Freelance)

- Built a full-stack music course management system (PHP custom MVC, MySQL/MariaDB via PDO) featuring GPS-geofenced camera attendance for teachers and students, combining live webcam capture (HTML5 WebRTC) with Haversine-based radius validation (100m) to prevent remote check-ins. Live and in daily operation, fully replacing the business's manual attendance and payroll tracking.

NutriMind: AI-Powered Nutrition Identification System (Group Project)

- Developed an AI-driven system designed to identify nutritional content directly from food photographs with high precision, ensuring accurate data mapping between visual inputs and nutritional databases to maintain system reliability and output verification.

EDUCATION

Universitas Muhammadiyah Jember

Bachelor of Information Systems (S.Kom) | Sep 2022 – Sep 2026 | **GPA: 3.88 / 4.00**

- Thesis: "Jember Tourism Recommendation System Based on Implicit Feedback Using Hybrid Filtering Method," deployed publicly with 1,500+ active users during the research period.
- GENBI (Generasi Baru Indonesia) Scholarship Awardee by Bank Indonesia.
- Head of Human Resource Development (PSDM) at HIMAFORSI (Information Systems Student Association): led technical mentoring workshops and peer-tutoring sessions for 100+ students.

COACHING & LEADERSHIP EXPERIENCE

SMPN 2 Balung

Mobile Legends Esports Coach (Extracurricular) | May 2023 – Jan 2026

- Coached the school's Mobile Legends esports program for three consecutive years, leading the team to 1st Place at the Kabupaten Jember Championship (SMP/MTs level) each year.

SKILLS

Programming & Frameworks

- PHP, Python, JavaScript/TypeScript, HTML/CSS, Laravel, React, Next.js, FastAPI, Vue.js

Databases & Infrastructure

- MySQL, PostgreSQL, Redis, ChromaDB (Vector Database), Real-Time Systems (WebSocket/Laravel Reverb)

AI & Machine Learning

- Retrieval-Augmented Generation (RAG), LangChain, Scikit-Learn, Sentence-Transformers, LLM Prompt Engineering

System Design & Security

- Multi-Tenant SaaS Architecture, RBAC (Role-Based Access Control), REST API Design, IoT Integration

Tools & Integration

- Git/GitHub, Midtrans Payment Gateway, WhatsApp Gateway (Fonnte), Telegram Bot API, DataTables, Select2
